David Vireak Phanalis Kholine Phearon

Lecture: Yeu Ratha

Role

Kosalvireak	:	coder
David	:	slides maker
Nalis	:	Idea proposer
Phearon	:	Idea proposer
Khoeline	:	flowchart maker

Flowchart

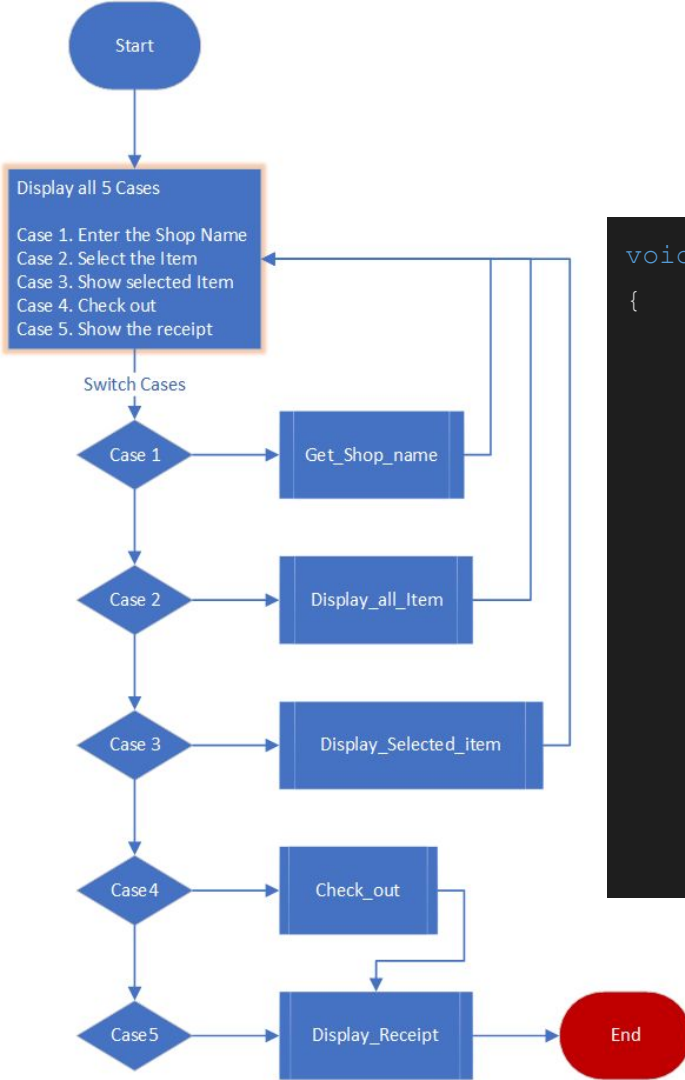

OOP usage

```
class Receipt
{
public:
    string Shop_Title = "ITE";
    string Customer_Name = "KosalVireak";
    string Pizza[2] = {"Pizza", "10"};
    string Fry_Chicken[2] = {"Fry Chicken", "3"};
    void Welcome_page(Receipt customer1);
    int Fun_take_num_of_item(string food_name);
    void Get_Shop_name(Receipt obj);
    void Display_allFood(Receipt obj);
    void Display_Selected_item(Receipt obj);
    void Display_Receipt(Receipt obj);
    void Welcome_page(Receipt customer1); };

int main()
{
    Receipt customer1;
    Welcome_page(customer1);
}
```

Demo

```
void Welcome_page(Receipt customer1)
{
    cout << "1 : Enter the Shop Name";
    cout << "2 : Select the Item" << endl;
    cout << "3 : Show selected Item";
    cout << "4 : Check out" << endl;
    cout << "5 : Show the receipt " << endl;
    int choice;
    cout << "Enter: ";
    cin >> choice;
    switch (choice)
    {
    };
}
```

```
Welcome to our System
-----
1 : Enter the Shop Name
2 : Select the Item
3 : Show selected Item
4 : Check out
5 : Show the receipt
Enter:
```

Demo

```
void Get_Shop_name(Receipt obj)
{
    cout << "Enter Your Shop Title: ";
    cin >> obj.Shop_Title;
    cout << "Enter Your Customer Name: ";
    cin >> obj.Customer_Name;
    Welcome_page(obj);
};
```

```
Enter: 1
Enter Your Shop Title: ITE
Enter Your Customer Name: Vireak
```

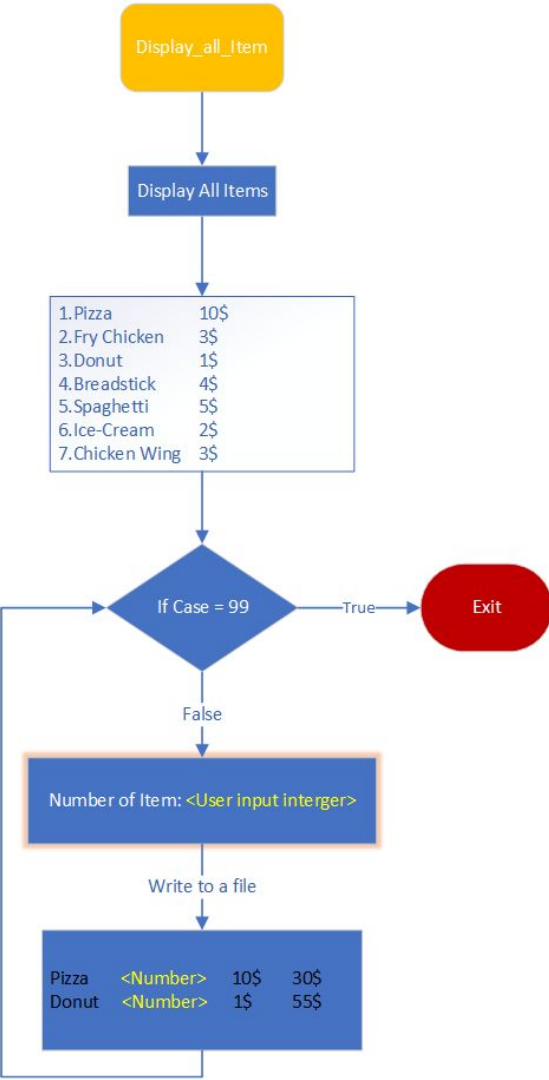

Get_Shop_name

Ask for Shop Title & Customer Name

Enter Your Shop Title: <User input string>
Enter Your Customer Name: <User input string>

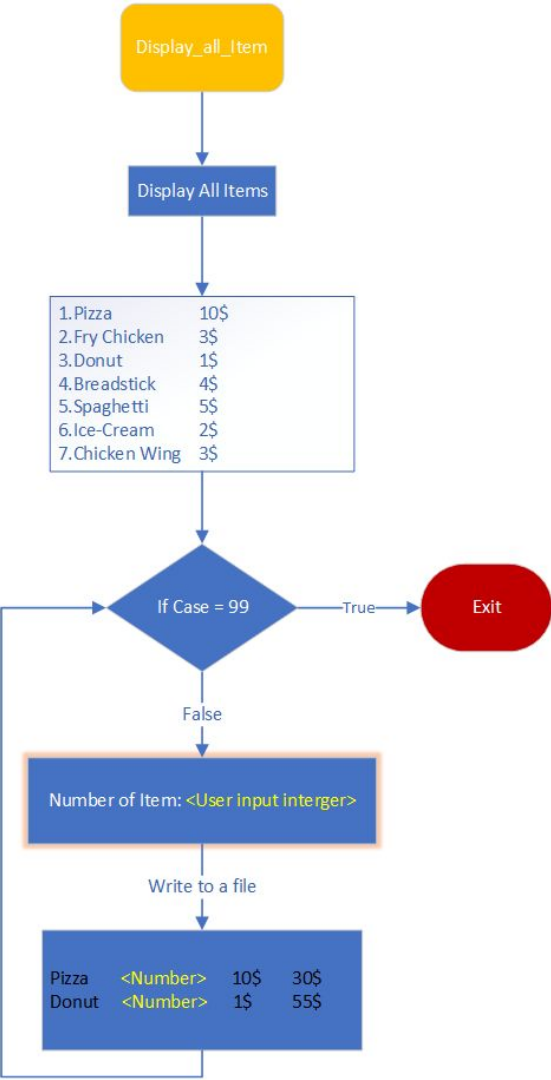

Exit

```

void Display_allFood(Receipt obj)
{
    ofstream MyWriteFile("save_receipt.txt");
    cout << "1." << obj.Pizza[0] << "          " << obj.Pizza[1] << "$";
    cout << "2." << obj.Fry_Chicken[0] << "          " << obj.Fry_Chicken[1] << "$";
    while (true)
    {
        cout << "Enter the index to choose the foods: ";
        cin >> add_item;
        switch (add_item)
        {
            case 1:
                Number1 = Fun_take_num_of_item("Pizza");
                MyWriteFile << obj.Pizza[0] << "          " << Number1 << " pcs"
                    << "          " << obj.Pizza[1] << "$"
                    << "          " << stoi(obj.Pizza[1]) * Number1 << "$";
                obj.Total_Price += stoi(obj.Pizza[1]) * Number1;
                Break;
            }
        }
    }
}
  
```

```
1.Pizza          10$
2.Fry Chicken    3$
3.Donut          1$
4.Breadstick     4$
5.Spaghetti      5$
6.Ice-Cream      2$
7.Chicken Wing   3$
99. Go back
Enter:
```

```
Enter: 2
Enter the index to choose the foods: 4
Enter Number of Breadstick: 5
Enter the index to choose the foods: 6
Enter Number of Ice-Cream: 3
Enter the index to choose the foods: 6
Enter Number of Ice-Cream: 1
```

Display_Selected_item

Read from the file and display

Exit

```
void Display_Selected_item(Receipt obj)
{
    string myText;
    ifstream MyReadFile("save_receipt.txt");
    while (getline(MyReadFile, myText))
    {
        cout << myText << endl;
    }
    MyReadFile.close();
};
```

```
Enter: 3
Breadstick      5 pcs      4$      20$
Ice-Cream       3 pcs      2$      6$
Ice-Cream       1 pcs      2$      2$
-----
```

Check_out

Display Total

Get Integer Input

Exit

```
void Check_out(Receipt obj)
```

```
{
```

```
    system("Color 00");
```

```
    cout << "The total price include tax is: " << obj.Total_Price * 1.1 << "$" << endl;
```

```
    cout << "Enter the Received amount in ($): ";
```

```
    cin >> obj.Received_amount;
```

```
    Display_Receipt(obj);
```

```
};
```

```
Enter: 4
```

```
The total price include tax is: 101.2$
```

```
Enter the Received amount in ($): 200
```

...

Enter: 4
